IBM BOB Hackathon 2026

The Problem

The Invisible Tax on Your Organisation

workers spend 15+ hours/week in meetings.

Most of that loss is invisible — it never appears on a balance sheet.

Nobody tracks it. The people causing it have no idea they are doing so.

The problem is not that meetings exist. Meetings serve a purpose.

The problem is that organisations have no instrument for measuring which meetings are working — and which are not

Without measurement, nothing changes:

- » The same recurring meetings continue indefinitely
- » The same decisions get deferred because the wrong group assembled
- » Bad meetings accumulate, grow, and spawn sub-meetings
- » They consume the calendar capacity of your most valuable people

The meeting that just ended cost more than you think.

So will the next one.

Every hour in a wasteful meeting is salary burned with no return.

A 10-person meeting at \$75/hr costs \$750 — before the follow-up it spawns and the hidden cost is worse: every meeting blocks a focus window.

Deep work requires 90+ uninterrupted minutes.

A calendar full of 30-minute gaps produces a busy week with nothing shipped

Introducing Meetrix

multi-agent AI system that makes invisible meeting waste visible and quantifiable

✓ Upload your calendar export (CSV)

✓ Attach meeting transcripts (optional)

✓ Get a full intelligence report in minutes

100% local · Zero cloud · Zero data leaves your machine

Step : 1 Upload Calender Export

Step : 2 Upload Transcript

Step : 3 Analyze

Introducing Meetrix

Overview

- „ Total meeting cost in dollars
- „ Average waste percentage across all meetings
- „ Number of people in meeting overload
- „ Number of cascade chains detected
- „ Overall Meetrix Score (0–100) — Healthy / Needs Attention / Critical Waste
- „ Top 5 prioritised recommendations with actions — Cancel / Shorten / Restructure
- „ Key findings from the AI report

Ask Meetrix

- „ Natural language Q&A over your own meeting data
- „ Ask about people, decisions, costs, or specific meetings
- „ Retrieves context from transcripts and notes before answering
- „ Fully local — your data never leaves your machine
- „ Examples: "What did Sarah say?", "Which meetings cost the most?"

Meetings

- Every meeting with its waste category — High Waste / Medium Waste / Low Waste / High Value
- „ Meeting type — standup, planning, decision, status-update, 1:1, brainstorm
- „ Cost per meeting, decision deficit, participation imbalance, recurrence staleness
- „ Action recommendation per meeting — Cancel / Shorten / Restructure / Keep / Merge
- „ Filter by High Waste meetings or Cascade Origins only

Introducing Meetrix

People & Focus Time

- „ Total meeting hours per person
- „ Focus time percentage — how much working time is uninterrupted
- „ Overloaded flag for anyone exceeding 15 hours of meetings in the period

Network

- „ Who collaborates with whom and how frequently
- „ Which people are most central — their absence breaks communication
- „ Which pairs share the highest meeting load
- „ Who is at risk based on meeting volume and focus health

Health

- „ Meeting count per type — standup, planning, decision, status-update, 1:1, brainstorm
- „ Average health score per meeting type (0-10)
- „ How many meetings had a clear agenda
- „ How many meetings had an appropriate duration for their type
- „ Average attendee fit — were the right people in the room

Introducing Meetrix

Trends

- „ Total meeting hours per person
- „ Focus time percentage — how much working time is uninterrupted
- „ Overloaded flag for anyone exceeding 15 hours of meetings in the period

Reports

- „ AI-written summary of the full analysis
- „ Key findings ranked by importance
- „ Top recommendations with reasoning
- „ Total cost, total meetings, Meetrrix Score, trend direction
- „ Projected annual saving and weeks to break-even
- „ Top changes that would have the highest ROI impact
- „ Export as Markdown or Plain Text

SCHEDULE A MEETING

MEETRIX SCORE: 79

MEETING DETAILS

This feature is in development. Preview the form below.

MEETING PURPOSE

What decisions need to be made?

ATTENDEES

One email per line — only invite decision-makers

DURATION (MINUTES)

60

GENERATE PROPOSAL

WHAT THIS FEATURE WILL DO

Smart scheduling powered by your analysis data — not just calendar availability.

WASTE PREDICTION

Before you book, see the estimated waste probability based on your team's historical patterns.

FOCUS-TIME AWARE SLOTS

Proposed slots avoid fragmenting deep-work blocks and flag attendees already in meeting overload.

AUTO-GENERATED AGENDA

Enter your purpose and required decisions — get a structured agenda drafted for you.

RIGHT-SIZE YOUR ATTENDEES

Identifies who truly needs to attend vs. who can get an async summary.

ICAL EXPORT

One click to add the proposed meeting to your calendar with agenda pre-filled.

BART: THIS BUILT FIRST?

Run an analysis and use the **Ask** feature to get scheduling recommendations from your own data right now.

Schedule a Meeting (Coming Soon)

- Coming Soon
- „ Predict waste probability before a meeting is created
- „ AI-generated agenda based on attendees and objective
- „ Smart attendee suggestions — invite only who is needed
- „ Best time based on focus window availability

Built with IBM BOB

Custom Modes That Made This Possible

- 🧠 deep-plan Architectural interview before a single line of code
- ⚙️ multi-agent-system-builder Backend generation from implementation.md
- 🎨 frontend-craftsman Frontend built against real API contracts

Skills: /grill-me · /neo-brutalism · /lint

MCP: docs-langchain (live LangChain + LangGraph docs)

Step 1 deep-plan mode + /grill-me skill

→ Structured architectural interview

→ Produced implementation.md (the full blueprint + * later manually refined to reduce number of agent)

Step 2 multi-agent-system-builder mode → Generated complete FastAPI + LangGraph backend

Step 3 frontend-craftsman mode + /neo-brutalism skill → Generated React + TypeScript frontend

Full system built in a single day.
